

BULLDOG TID-BITS

- The fastest way to cool down a bulldog is spraying rubbing alcohol on the inside of their paws/pads
- Wiping your bulldog after coming in from outside with a wet, cool washcloth helps with their allergies
- Use treats the size of cheddar goldfish snacks. Or better yet? Give them the Cheddar Goldfish treat!
- When your dog is not feeling well: take a temp, look at their gum and tongue color (for pink) and monitor their water intake
- Keeping your dog in their crate while you are gone: a) is a great anti-theft device to prevent a burglar from taking your dog; b) in the event of a fire, you will know EXACTLY where your dog is in your home; c) gives them comfort instinctively for their "cave environment"; d) feeding them in their crate provides you EXACTLY how much food they've consumed, in case your vet asks if they are not feeling well; and e) keeps them safely away from something that they could chew
